

A large iceberg floats in the ocean under a blue sky. The top of the iceberg is visible above the water, while a much larger, jagged portion is submerged below the surface, illustrating the concept of the 'tip of the iceberg'.

Visualizing Our Natural World

Unleash your creativity as you learn to photograph nature and expand your personal vision of the world around you.

ART X403: VISUALIZING OUR NATURAL WORLD

Through lectures, demonstrations, and field trips, students study camera setups, lens choices, lighting techniques, and post-production choices that enhance their subject matter in nature. This is an opportunity to document your subject, and refine and interpret it to yourself and others. A highlight of this course is the opportunity to photograph small animals in controlled situations under the instructor's guidance.

Taught by Ralph Clevenger

Clevenger, a distinguished award-winning photographer whose work has appeared in many *National Geographic* publications, specializes in location photography and video projects featuring eco-travel, wildlife, and undersea subjects. Clevenger was also a highly regarded senior faculty member at Brooks Institute for 33 years, has traveled the world on photo assignments, and is the author of *Photographing Nature*.
